## Course Outline

### **Airsoft Tactical Pistol Shooting Course**

#### **Who is this course for?**

The Airsoft Tactical Pistol Shooting Course has been designed to meet the needs of Law Enforcement Officers as an introduction to the safe use of firearms or for beginners or as a further professional development for students with some operational or firearms training and experience in the use of firearms or Airsoft guns.

#### **Course Goals**

The course syllabus includes weapon familiarisation and operation, stance, drawing and reloading, sighted and instinctive point shooting and closes quarter combat tactics including disarming.

#### **Course Location**

The course would be held at a training location ~ facility to be arranged pending availability and risk assessment.

Upon arrival at the training location learners will be registered on to the course and there will be a safety briefing to all learners. The course has been designed to be of benefit to select law enforcement agencies and roles but is of particular importance to:

- Security Personnel/CPO/Law Enforcement Officers
- Operational Staff who carry firearms
- Police Officers
- Members of Airsoft groups or individuals who are interested in Airsoft shooting

#### **Additional Course Information**

Airsoft pistols allow the learner to examine other aspects of tactical pistol training, many of which are impossible or very dangerous to carry out with Real pistols. These pistols are NOT toys, they are spring or gas powered and fire a plastic pellets with considerable force.

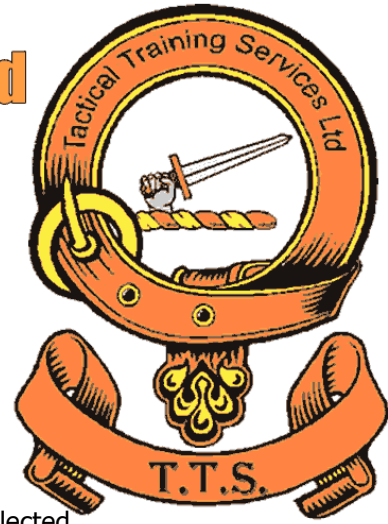

Safety helmet, full facemask or goggles will be required at ALL times when using these pistols for safety.

The course is all aimed at safety, both your own safety on the street and the learner's safety on the training course. The majority of people today would not even consider handling a gun for the social element or knowledge and understanding. An Airsoft pistol may give someone the sensation of shooting a pistol and all the fun at the same time as well as providing another tool for realistic scenario based training.

The Airsoft pistols are the same size as a real pistol or handgun; the learner can use the same holsters that house real pistols.
